### S & R Optic GmbH

#### **Brief description:**

The company S & R Optic GmbH specialises in the manufacture of crystal-optical components and units. The company mostly produces customer-specific products in the spectral range of 190 nm to 8000 nm. The product range includes waveplates, gradual compensators, compensator plates, polarisers, beam splitters, etc.

S & R Optic GmbH was established by Dr. Wolfgang Schneider in late 2009 and is a family-owned business. The incorporator and employees can look back on many years of management experience in the most reputable companies in the crystal optics industry.

The heart of S & R's production is the manufacture of mica waveplates.

With the models offered, waveplates in a spectral range of 350 nm to 3500 nm are fabricated in small and large series. Furthermore, if needed, additive compound coatings can be applied directly to the mica sheets.

S & R operates internationally and successfully on several markets, e.g. research and development, laser technology, scientific instrumentation, medical technology, and other industries.

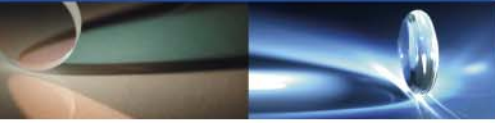

The S & R product dimensions range from a few millimetres to more than 200 mm.
