Viaoptic GmbH

- **Established: 2003**
- **Employees: 50**
- **Service portfolio**

The core competence of VIAOPTIC GmbH is the development and production of optical components and systems made of plastic.

- **Products and services**

- Optical design
- Prototype construction
- Injection moulding tools
- Customised manufacturing of parts and assemblies – no products of our own, always customer-specific

- **Fields of application**

- Optical applications in automobiles, head up display
- Steering angle sensors
- Distance measuring equipment
- Illumination optics
- Industrial sensors, e.g. light curtains, barcode scanners

- **R&D topics / specific strengths**

- Systems development from optical design to prototype to series production, resulting in rapid times-to-market, very high quality and dependable implementation from the original idea to the functioning product

- **Specifics**

- Special plastic processing know-how in
- connection with optical applications
